

OPTIMIZED OPERATION

G2_REAR PEN HOLDER

Compared to the original pen holder, the G2_REAR PEN HOLDER from PWA clicks into place much more easily and is just as easy to remove from the holder. With the original, it was laborious to insert the eyelet at the end of the touch pen into the small pin provided on the device. It was so tight that it could only be removed with force. Now a jaw clip ensures a firm hold and easy removal of the pen.

Replacing of the pen holder takes no time at all and can be done by the user.

FUNCTION

Easy Handling

FACTS

- Easy change of the original to the REAR PEN HOLDER, exchange possible by self-assembly.
- The engagement and disengagement process works more smoothly.
